

Specialised diversity.

Giving customers what they need.

Where we came from

Founded in the year 1988, the Mussiaby Fibreglass Establishment began its operations as a small design, manufacturing and trade business specialised in GRP or Glass Reinforced Plastic, also known as fibreglass. The company made a reputable name for itself, which began in the manufacturing and maintenance of international food-grade-quality water tanks, lightweight boats and car sheds. It built on the grounds of ethical conduct, competitive prices and competence in end product quality and post-delivery service, with one bottom-line mission in mind: to give the customers what they need. It continues to do so today with over a dozen ranges of products under its belt. With 'specialised diversity' as its unique selling proposition, the sky is the limit for this institution and its valued clients.

Where we are headed

A trait that has set the Mussiaby Fibreglass Establishment apart from its counterparts in the market is that it has managed to grow and develop with today's fast-moving world, remaining up-to-the-minute in adapting itself to innovative implications while maintaining a family business approach to dealing with its valued clients, which has helped it retain major public and private entities in the market as loyal customers. The company continues to build these relationships through direct communication and attention to each customer's requirements. The establishment carries on being devoted to operate in the best practices of manufacturing while minimising the impact on the environment in its industrial activities.

Tradition. Fresh methods.

Out with the old in with the new - Mussiaby Fibreglass Est. values tradition yet guarantees a healthy balance of fresh methods and innovation where it is needed.

The Mussiaby Fibreglass Establishment is one of the leading water tank manufacturers in the market. Our tanks, being non-toxic and abiding to international specifications standards, can be used for storage of any liquid ranging from dangerous chemicals to oil to water, depending on the client's request. The selection of grade-A raw materials, which are always pretested, paired with experienced workmanship and outstanding finishing ensures high standards of delivered end product.

Water storage solution is the company's chief forte. The Abu Dhabi based factory manufactures a range of Food Grade water tanks in-house and has become one of the main distributors of this product in Abu Dhabi and the U.A.E. market as a whole. The company specialises in the trade of GRP, PVC, hot-pressed water tanks, and handles GRP lining for concrete water tanks. Its main vision being to diversify its potential, the company conforms in doing so by offering the full line to the demanding market.

The flexible nature of GRP production grants the ability to design and manufacture everything and anything. The company hence breaks the mould of the old preset frame of mind in formulating solutions, while maintaining a classic one-to-one approach in dealing with its clients.

Product line.

GRP manufacturing is mould-based, which makes the product variety endless. The standard products on offer include the following.

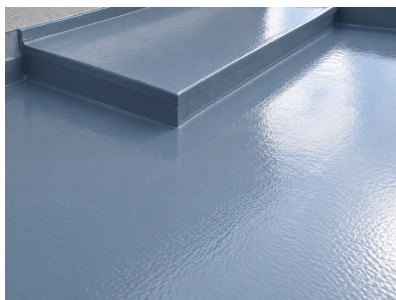

GRP tanks

Hot pressed sectional water tanks DOHA and HYUNDAE panels from Korea, vertical cylindrical water tanks (potable, chemicals and fuels), horizontal cylindrical water tank (potable, chemical and fuels), septic tanks and soakaways, half tanks, rectangular tanks.

Polyethylene water tanks (Polyaoun)

These tanks have won international acclaim for their complete hygiene, durability, easy installation and resistance to fungus and bacteria. Besides being rust proof and leak proof, the tanks come in a range of sizes from 100 gallons to 5000 gallons in both the vertical and horizontal designs.

Lining and accessories

Cover slab, lining for walls and floors of manholes and water tanks, cages, tank ladders, cabins and fridges, boxes, cover sheets, domes and minarets, false ceilings, sun screens, wall cladding, chairs and tables, flower boxes, A/C trays, shutter mould, bath tubs, mobile water closets.

Car sheds

Available in four different models and various mould sizes.
